Julia is a great programming language. There are few things that are special:

- Multiple dispatch
- JIT compilation

## WE CAN TRY SOME CODE

```
1 using MomentBasedEstimators  
2 a = randn(10)  
3 estimate!(GMM, fn, x0)
```

Of course

$$y = x\beta + u$$

## A BLOCK EXAMPLE

An example

Block 1

An example

Block 2

- IO
- Tu
